

## Day 3 - 27.8.2022

### The calm before the start

It was already half past 9 when I woke up, went to the kitchen and made myself some breakfast. Everyone had gotten up shortly before.

At around 2pm, 3 Mexican students arrived, who were also part of our group. So, we used the time until then to complete reports or do more paperwork. Jesco, Tara and Yvonne went to the beach and enjoyed the warm water. Arthur, Ralf and I continued to prepare.

When we got the news that they were now at the Titusville Mall at 1 pm, we got right into the car. During the 45 minute drive, Turner, Abraham and Ian (*on the picture from left to right*) checked in at the NASA-Admission.

The reunion with Abraham made all of us very happy, but likewise it was great to get to meet Ian and Turner.

Since the three hadn't seen everything that we had seen before, we went on a little sightseeing tour. We visited the huge Blue Origin complex, the Kennedy Space

Center, the SLS rocket that will fly to the moon the day after tomorrow, and the Redstone rocket.

Afterwards, we drove to our apartment, unloaded the suitcases and had a great reunion, because now also Yvonne, Tara and Jesco could welcome Abraham. Right after that we went to the beach two blocks away, so that the three could properly arrive for the first time. It was cloudy, but still tropically warm. The salt water of the Atlantic Ocean had a temperature of at least 30 degrees, so we took our time. After a few rounds of rugby and an attempt at surfing on a skimbord, we headed back home.

We now took the three to their apartment with a quick stop at Walmart to buy them mobile hotspot. After setting up the hotspot and visiting the apartment, Yvonne, Arthur and I drove back to our location.

Before that, some nice people on the beach had told us that there should be algae in the water tonight, which would glow blue. Unfortunately, this was not the case. Let's see if it works tomorrow.

With that, the day had come to an end. I am already curious about tomorrow.
